AmazeTech to receive Experimental & Innovation Award at 26th Annual Webby Awards

Los Angeles-based start-up recognized for new Sign Wave translation software

Los Angeles, CA: AmazeTech Inc., announced today that they will be honored with the Experimental & Innovation award in the 26th annual Webby Awards.

Dubbed the “Internet’s Highest Honor” by the New York Times, The Webby Awards are presented by the International Academy of Digital Arts and Sciences (IADAS), the leading organization honoring excellence in the digital field.

The Experimental & Innovation Award rewards the effective use and implementation of unconventional mobile technology in websites, applications, and environmental situations.

“Honorees like AmazeTech are setting the standard for innovation and creativity on the Internet,” said Claire Graves, Executive Director of The Webby Awards.

AmazeTech is an emerging software company which has developed a new translation application called Sign Wave. The app provides hearing-impaired individuals the instant ability to translate sign language into audio files using only a smartphone.

This new software allows users of American Sign Language (ASL) to communicate easily with hearing individuals, without the need for lip reading. Sign Wave breaks down the common communication barriers between the hearing-impaired and non-impaired, creating a more connected and unified society.

“All of us at AmazeTech are honored to be receiving the Experimental & Innovation Webby Award,” said Jonathan Williams, Founder and CEO of AmazeTech. “We have dedicated over two years to developing an easy-to-use application that brings people together through real-time communication. It’s a source of gratitude and humility that the awards committee of the International Academy of Digital Arts and Sciences values that goal.”

AmazeTech will be honored at the Webby Awards Internet Ceremony on Tuesday, August 17, 2021 at 3 pm ET. Fans will be able to tune in and watch the award presentations virtually at watch.webbyawards.com.
